Features

Conformal coating

PSE250 is conformal coated to withstand noncondensing tropical environment.

Under voltage logic alarm

On DC-inputs a built in logic alarm changes to alarm state if the converter voltage drops below -10 % of nominal output. The alarm circuit also controls the DC OK LED. The DC OK or POWER GOOD signal is logic 1. The drive voltage is 8 to 10 V, 5 mA = logic 1. See also Figure 2.

Over Voltage Limit OVL

A second regulation circuit takes over in case the main regulation fails. The output voltage is limited to approximately +15 % over nominal output voltage.

Over Voltage Limit Input OVLIN

The unit switch-off in case of an over voltage on the input. This circuit protects the semiconductors for failures due to over voltage.

Optional Features

Over voltage protection OVP, option A

The output filter is limited to 15 % over nominal output voltage. A thyristor short-circuits the output.

Under voltage alarm with relay, option B

The logic alarm output is replaced with a relay with selectable alarm logic NO or NC.

Alarm = No input or low output <-10 % of nominal output, see figure 3.

The relay is rated 30 V 0.5 A (a.c. & d.c.).

Built in series diode, option C (Derating 20 %)

A series diode on the output, which is mounted inside the case. Use this option when output is connected in parallel with other power supplies to achieve redundancy. The output power is derated. It is model depend, contact factory.

Built in series diode with resistor, option CR

With a series resistor the output can be parallel connected with 2 or more units which passively balance the load between the units.

Remote sense, option S

The voltage sensing can be put at the load to compensate for voltage drop.

Inrush current limit with NTC, option H

Only for 110 or 110T input code. Reduce the inrush current during start up will be affected.

Contact factory for other inputs.

Series diode on input, option K1

If hold-up time is specified, a series diode on the input is needed. Depending on input voltage the unit will be derated due to the diode losses. The series diode also provides reverse voltage protection and is recommended if long distance between input fuse and unit input (>3 m).

2.5 kVa.c. isolation Input/case, option E1

On 24, 36 and 48 inputs.

The emission level increase to level A.

2.5 kVa.c. isolation Output/case, option E2

The emission level increase to level A.

Train input

Input voltage range according to train standard EN 50155 and IEC 60571. See Mobile Inputs, page 1.

Extra cooler, option T3

To meet EN 50155/IEC 60571 specified T3 ambient temperature demand +85 °C during 10 minutes.

The unit is then 12TE wide as a slide in unit. With option N, wall/chassi mount, the unit will be 58 mm high.
